Sequence 9, Application US/09880503

Patent No. US20020131964A1

GENERAL INFORMATION:
APPLICANT: CINES, Douglas B

APPLICANT: HIGAZI, Abd Al-Roof

TILLE OF INVENTION: COMPOSITIONS AND METHODS FOR MODULATING MUSCLE CELL AND

TILLE REFERENCE; 9596-331

CURRENT FILING DATE: 2001-06-13

PRIOR PELICATION NUMBER: US/09/880,503

CURRENT FILING DATE: 2000-06-20

NUMBER OF SEQ ID NOS: 18

SEQ ID NO 9

LENGTH: 96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1, Application US/09880503

plasma hyaluronan-binding protein precursor - mouse
C;Species: Mus musculus (house mouse)
C;Species: 11.Mar-1998 #sequence_revision 11-Mar-1998 #text_change 16-Jul-1999
C;Accession: JC5878
R;Hashimoto, K.; Tobe, T.; Sumiya, J.; Saguchi, K.; Sano, Y.; Nakano, Y.; Choi-Miura, 1
Biol. Pharm. Bill. 20, 1127-1130, 1997
A;Title: Cloning of the cDNA for a mouse homologue of human PHBP: A novel hyaluronan-b.
A;Reference number: JC5878; MUID:98065239; PMID:9401717
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A.Residues: 1-558 «HAS»
C.Comment: This protein acts as serine protease.
C.Superfamily: plasma hyaluronan-binding protein; EGF homology; kringle homology; tryp:
F.1-23/Domain: signal sequence #status predicted <SIG»
F.24-311/Product: plasma hyaluronan-binding protein large chain #status predicted <MAT:
F.75-106/Domain: EGF homology <EG1>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            F;113-145/Domain: EGF homology <EG2>

Objective factor XIIa (EC 3.4.21.38) precursor - bovine (fragment)

Natternate names: Hageman factor (activated)
Cispecies: Bos primigenius taurus (cattle)
Cispecies: Bos primigenius taurus (cattle)
Cidate: 10-Apr-1995 #sequence_revision 22-Apr-1995 #text_change 21-Jan-2000
CiAccession: S45281; A61329

plasming C6 3.4.21.7) precursor - goat (fragments)
NyAternate names: plasminogen
C;Species: Capra aegagrus hircus (domestic goat)
C;Species: Capra aegagrus hircus (domestic goat)
C;Species: Capra aegagrus hircus (domestic goat)
C;Accession: C61545
R;Schaller, J; Rickli, E.E.
Enzyme 40, 63.469, 1988
A;Title: Structural aspects of the plasminogen of various species.
A;Reference number: A61545; MUD:89005015; PMID:3168975
A;Status: preliminary
A;Molecule type: protein
A;Residues: 1.123 <SCH>
C;Superfamily: plasmin; kringle homology; plasminogen-related protein precursor homolc C;Keyword8: hydrolase; serine proteinase
F;41-118/Domain: kringle homology <KR4>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                C,Accession: B32869, B33848

Dairy J. 5:605-617(1995).
-!- CATALYTIC ACTIVITY: Specific cleavage of Arg-|-val bond in plasminogen to form plasmin.
-!- INDUCTION: By retinoic acid.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.
-!- SIMILARITY: Contains 1 kringle domain.
-!- SIMILARITY: Contains 1 EGF-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Bovine urokinase-type plasminogen activator and its receptor: cloning and induction by retinoic acid.";
